System and Method for Mapping Management Objects to Console Neutral User Interface

ABSTRACT

A generic management definition object, described using a CIM MOF file or an Extensible Markup Language document, can be used to format display panels that are independent of A generic integration layer is created management console. between the management data and the display and behavior of A transformation engine is used to convert data such data. in management data to a definitions included structure that is stored in a repository. A translation engine renders the formatted structure into graphical user interface constructs that are independent of any particular management console architecture. The transformation translation engines coordinate a set of processes that facilitate the display and manipulation of the management data object's data model. GUI display panels that support the management model are generated in a console neutral manner so the same panels are displayed from a variety management consoles.
